

# Job Portal Reporting Tool for a Big Placement Company near NYC

## Description:

A placement company having office in more than 7-8 locations wanted to develop its market by utilizing its limited resources correctly. There were many factors including jobs available vs skills available by registered members, jobs available according to the location vs skills in that area, trend analysis of demand and Trend analysis of areas.

Clubbing all, we came up with some group reports using Qlikview. These reports helped the client to know about some vital statistics and arriving at right decision was easier. One report which gives Pareto analysis of Skills in the area Vs position limited to typical geographical area helped the sales people of the client phenomenally.

## Responsibilities

- ✓ Understanding the business requirements.
- ✓ Designing business solutions with our in-house Consultants
- ✓ Designing and developing ETL mappings in SSIS to fetch data from client data sources (OLTP), then transform it and load it into Data
- ✓ Bridging MySQL wherever needed.
- ✓ Developing Dynamic reporting front end with Qlikview
